Thread rolling apparatus with a mechanism to vary the distance of the rolls to the center of the workpiece is described in which an elastic member (e. g., a spring) inserted in the power system, allows only a certain maximum pressure of the rolls. The apparatus is characterized in that, on a known thread rolling head for producing outside and inside threads its mutually adjustable rolls pivot on the eccentric parts that carry mating pinions together with an indented, and adjustable disk, which, concentric with the workpiece axis, introduces the working pressure of the rolls into the (Machinery--Manufacturing, TT, v. 5, no. 4) (over)
